```php
<?php
$servername = "localhost";  // Your database server
$username = "root"; // Your database username
$password = "tej11"; // Your database password
$database = "ADBS"; // Your database name

if ($_SERVER["REQUEST_METHOD"] == "GET" && isset($_GET["ssn"])) {
    // Get the SSN (Social Security Number) from the URL parameter
    $ssn = $_GET["ssn"];

    // Create a database connection
    $conn = new mysqli($servername, $username, $password, $database);

    // Check the connection
    if ($conn->connect_error) {
        die("Connection failed: " . $conn->connect_error);
    }

    // SQL query to delete the record with the specified SSN
    $sql = "DELETE FROM employee WHERE SSN = '$ssn'";

    if ($conn->query($sql) === TRUE) {
        echo "Record with SSN $ssn has been deleted successfully.";
    } else {
        echo "Error: " . $conn->error;
    }

    // Close the connection
    $conn->close();
} else {
    // Handle the case where no SSN is provided or the request method is not GET
    echo "Invalid request.";
}
?>
```
